/George Eng/ Supervisory Patent Examiner, Art Unit 2617							

Continuation of 11, does NOT place the application in condition for allowance because:

- The applicant argues that the examiners position, that an LED 11 emits light in all directions, such that the light will be emitted along the printed circuit board, is in direct contrast to the express disclosure of the APA and the claim recitation of "wherein the light emitting surface emits light in a direction along said printed circuit board".

The examiner respectfully disagrees. As one of ordinary skill in the art knows, an LED is not a laser which only emits light in one direction. A surface LED, regardless of which direction it emits light, will also disperse some light in other directions despite the fact that it is pointed in one direction. Emitting light in a direction along said printed circuit board, broadly interpreted, is anticipated by the APA and is not in direct contrast to the disclosure of the APA.

- The applicant argues that Ariga teaches using side-emitting type LED eliminates the need to bend the lead terminals, and if an LED emitted light in all directions, such a bending would not be required.

The examiner respectfully, disagrees. When the examiner stated that light is emitted in all directions, the examiner was not saying that light was evenly distributed in all directions evenly. As one of ordinary skill in the art knows, an LED is not a laser which only emits light in one direction. A surface LED, regardless of which direction it emits light, will also disperse some light in other directions despite the fact that it is pointed in one direction.

- Applicant argues that the examiner has failed to establish prima facie obviousness in the combination of APA and Ariga.

The examiner respectfully disagrees. APA clearly teaches of the utilization of an LED and Ariga teaches that an LED can be of various types, so it would have been obvious to a skilled artisan to modify APA with Ariga to provide a method whereight can be directed in a general direction without having to bend the lead terminals to mount the LED, where bending could result in a greater risk of breakage at a later time.
